## Pure spas manual

### First start-up

When the electricity has been activated on the spa, the spa will start up automatically. When the spa starts up, 'Pr' will appear in the screen of the control panel. 'Pr' stands for Priming mode and takes exactly 4 minutes before spa starts running in Standard mode. The circulation pump will start running, and the water temperature will be measured.

### Set time

Everytime the spa will be switched on, you have to set the time. This is very important because of the filter cycle settings. To set the time, press on  and afterwards on . As you can see, you can set the hours. To set current time, press  or  just once. The time will run up or down automatically. To stop the time press on  or . When you have set the current time, press on  to set the time.

### Set the temperature

In the display, you will see the current water temperature. By pressing  or , you will see the set temperature. By pressing , the set temperature will rise. By pressing , the temperature will go down. Everytime you press the 'warm' or 'cool' button, the set temperature will change with 0,5°C. When you have set the desired temperature, wait 3 to 5 seconds. After 3 to 5 seconds, the desired temperature has been set, and the spa will heat the water(when necessary).

### Mode/Prog

There are 3 different modes on the spa. Standard, Economy and Sleep. In the display, you can see which mode is currently running.

#### *Standard mode:*

The standard mode makes sure, the water will always be on the desired temperature. This means you can be sure, you can use the spa anytime you want!

#### *Economy mode:*

The economy mode will heat up the spa but, only while spa is filtering. Between the set filter cycles, spa will not heat.

#### *Sleep mode:*

The sleep mode is a special mode. It is a special designed vacation mode. When you set the spa in sleep mode, the water temperature will drop down gradually to a minimum of 15°C.

To set the a mode, first press on  and then on . As you can see in the display, the mode will change. To set the spa in another mode, press again on 'cool' and 'mode'.

### **Jets 1**

Jets is a massage pump. When you press the button Jets 1 , pump 1 will be activated. When pressing again on Jets 1 , the pump will be deactivated. There is a special safety programmed in the spa. When a massage pump is running, it will deactivate automatically 15 minutes after activation.

### **Jet 2 (Only works when spa has 2 or 3 massage pumps)**

Jets 2 has the same function as Jets 1. There is one difference, the Jets 2 button controls two separate pumps. When pressing the Jets 2  button for the first time, pump 2 will be activated. By pressing it for the second time, pump 3 will be activated. By pressing it for the third time, pump 2 will be deactivated. By pressing it for the fourth time, pump 3 will be deactivated.

### **Blower**

The blower is a special air pump, which will blow air bubbles through the air jets. To activate the blower, press . By pressing the blower button again the blower will be deactivated. Also the blower, will be deactivated automatically after 15 minutes.

### **Light**

To switch on the light, press . To switch off the light, press the light button again. Also the light has a special factory safety setting. When the light has been activated, it will be deactivated automatically after 4 hours.

### **Set the filter cycle**

In the filter cycle, the circulation pump will circulate and filter the water to make sure the water remains clear and clean(together with the sanitizer). To set the filter cycle, press the following button combination within 3 seconds:  and . When pressed, you can see 'SET START FILTER 1 (AM)' in the display. By pressing the 'cool' or 'warm' button, you can set the desired start time. By pressing  you can also set the minutes. Press  again, When pressed, you can see 'SET START FILTER 2' in the display. To set the end-time, press 'cool' or 'warm'. To set the second filtercycle, press again on . Just repeat the same as you did with Filter cycle 1 but, make sure you do PM instead of AM! Otherwise both filtercycles will run at the same time, which means there will be just 1 cycle. When you have set all the times, keep pressing  untill you can see the current water temperature in the display and the settings will be saved.

### **Panel lock**

You can lock the panel by pressing a button combination within 3 seconds. To lock the panel, press: Time, Blower, Warm. As you can see in the display, the panel lock is activated. You can press every button you want but, nothing will be activated. To unlock the panel, you have to press the following combination within 3 seconds: Time, Blower, Cool.

### **Temperature lock**

You can lock the set-temperature by pressing the following combination: Warm, Time, Blower. When temperature lock is activated, the temperature cannot be changed. To unlock the temperature lock, press : Cool, Time, Blower. Right now you are able to set the desired temperature again.
